Bálint Molnár

Software Developer

PROFILE

Throughout my finance and software development experience, I have worked with numerous clients on various business projects, actively contributing to both their planning and implementation.

PROJECTS

For My Darling — Aphyra Games (Engine: Python / Ren'Py)

Links: Website | Press Kit | Steam | Itch.io

- Performed development and leadership tasks throughout the project
- Developed the story, designed and programmed the core gameplay loop, and established CI/CD processes.
- Designed the user interface and user experience (UI/UX), and established graphic and visual workflows.
- Contributed as a composer and participated in marketing and social media activities.
- Managed builds and releases on itch.io using the Butler CLI.
- Optimized graphics asset workflows handling thousands of image assets.
- Established a consistent SEO presence: press kit, brand guidelines, and visual identity system (color, typography, and logo usage rules).

FuFu — *SaaS (*Stack: React + TS + Vite + Supabase + PostgreSQL + Cloudflare + Git)

Link: Demo

- React, TypeScript, Vite, CSS, development of a web application for recipe management, weekly meal planning, and shopping lists.
- Supabase, PostgreSQL, Supabase Auth – data modeling, SQL queries, registration, login, and access control.
- Store-specific pricing, shopping cost calculation, quantity management, and recipe import and sharing via file, URL, and QR code.
- Mobile-optimized UI, custom CSS components, PWA, and installable web application.
- Vitest, ESLint, automated tests, error handling, and code quality checks.
- Git, GitHub, Cloudflare Pages, version control, builds, and production deployment.

WORK EXPERIENCE

Software Developer

Aphyra Games – Sárvár, 2025.01 – 2026.10

- Development of a complete indie game.
- Managed the full development lifecycle: development, testing, bug fixing, building, localization preparation, and release preparation.
- CI/CD pipeline.
- Designed and developed complex UI/UX systems and responsive, player-friendly interfaces for different resolutions and platforms.
- Independent problem-solving and debugging; identifying and fixing hard-to-reproduce UI, state management, input, transition, audio, and timing issues.
- Created modular, maintainable code, reusable components, structured scripts, consistent naming conventions, and development structures.
- Managed and optimized multimedia pipelines and integrated assets into the game.
- Cross-platform approach – supporting different screen sizes and control methods beyond PC, including Steam Deck considerations.

Other

- Git
- Butler CLI
- Node.js
- Netlify
- Ffmpeg
- VirtualBox
- Ren'Py
- Godot

SKILLS

- Agile / Scrum methodologies
- Git and version control
- CI/CD pipeline creation
- REST API development
- Debugging and troubleshooting
- Code review
- Cross-platform development
- Performance optimization
- UI/UX design and implementation
- Problem-solving and prevention
- Teamwork and leadership
